

Name of the Website: ankitnathrealtor.com

Description: This website will be the website for my real estate portfolio. I plan to have access to houses I am selling currently as well as houses I have sold in the past. I also want to have an area where people can contact me if they are interested in either buying or selling a house. My website will also have an about me section just letting people know about my past and how I am local. It will also have links to top areas in the state with sorted listings under each city.

Page Names:

1. Intro Page
2. About Me
3. Featured Listings
4. Contact Me
5. Apply to the Team

Data I will Be Storing:

- I will be storing a list of all Property listings with images of the property and pricing information as well as features and amenities of the property
- I will be storing User Profiles/contact information such as name, number, email, and saved/favorited searches by the user
- I will also be storing users' search and filter data so I am able to suggest better houses without having to have a separate meeting for that
- I will be storing data on listing agents and the properties they are currently representing with their contact number and email.
- I will be storing communication logs between clients and either myself or my team.
- I will be storing a database with reviews/ratings left by clients and former clients
